OVERVIEW

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result	Passed
Audit Date	6 April 2024

CONTRACT DETAILS

Token Address:

Cdgzy4ggPbgigRVjUyuh18UFTsK1Whc46yeNMHMRtBjW

Name: 2 Funny Cats

Symbol: TWO

Current Supply: 9,999,999,999.00

Unlocked Tokens : 1,092,999,999.00 (10.92%)

Decimals: 9

Fees: 0%

Network: SolScan

Token Type: Solana

Owner: Renounced

Update Authority:

5mzfXx3Vk9xVhBHijCdXVsrkaDb5tgdjFUEWhwi467TD

Listing On : Raydium AMM V4

METADATA RESULTS

EditionNonce	255
TokenStandard	2

METAPLEX METADATA

Metadata on the Solana blockchain serves as supplementary data for a digital asset or Non-Fungible Token (NFT), encompassing details such as the asset's name, description, image, attributes, and other significant information that offers a comprehensive description of the asset.

Within the Solana network, this metadata typically takes the form of JSON files linked to the asset via its distinct identifier, or token ID. The aim of this metadata is to furnish crucial insights about the asset, thereby improving user and application interaction with and comprehension of the asset.

URI METADATA

In the Solana ecosystem, URI metadata refers to the data associated with a token that can be retrieved using its Uniform Resource Identifier (URI).

URI :

<https://nftstorage.link/ipfs/bafkreig7cppjhcn24ed34zh7vdwlks7d3n6jknxg4qnpvjir4xornm26ve>

Metadata is retrieved from token's URI: <https://nftstorage.link/ipfs/bafkreig7cppjhcn24ed34zh7vdwlks7d3n6jknxg4qnpvjir4xornm26ve>

AUDIT METHODOLOGY

Audit Details

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

Audit Goals

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

Code Quality

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

VULNERABILITY CHECKS

Design Logic	Passed
Compiler warnings	Passed
Private user data leaks	Passed
Timestamps dependence	Passed
Integer overflow and underflow	Passed
Race conditions & reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front Running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zepplin module	Passed

RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

High Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Medium Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Low Risk

Issues on this level are minor details and warnings that can remain unfixed.

Informational

Issues on this level are minor details and warnings that can remain unfixed.

MANUAL REVIEW

Severity Criteria

Expelee assesses the severity of disclosed vulnerabilities according to methodology based on OWASP standards.

Vulnerabilities are divided into three primary risk categories:

High

Medium

Low

High-level considerations for vulnerabilities span the following key areas when conducting assessments:

- Malicious input handling
- Escalation of privileges
- Arithmetic
- Gas use

Overall Risk Severity				
Impact	HIGH	Medium	High	Critical
	MEDIUM	Low	Medium	High
	LOW	Note	Low	Medium
		LOW	MEDIUM	HIGH
	Likelihood			

MEDIUM RISK FINDING

Optimization

Severity: **Medium**

Subject: Token Metadata Update

Status: Open

Overview:

Metadata includes the token's name, symbol, image, and other relevant details. The power to modify this metadata lies with the token contract's owner or another appointed authority, separate from the mint authority's functions.

Suggestion:

The updateAuthority possesses the ability to alter the metadata of a token, covering aspects such as its name, symbol, and logo. While such modifications are uncommon, it is crucial to acknowledge the existence of this capability.

ABOUT EXPELEE

Expelee is a product-based aspirational Web3 start-up. Coping up with numerous solutions for blockchain security and constructing a Web3 ecosystem from deal making platform to developer hosting open platform, while also developing our own commercial and sustainable blockchain.
