20	Disclaimer	

OVERVIEW

The Expelee team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analysed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

Audit Result	Passed
KYC Verification	-
Audit Date	22 May 2023

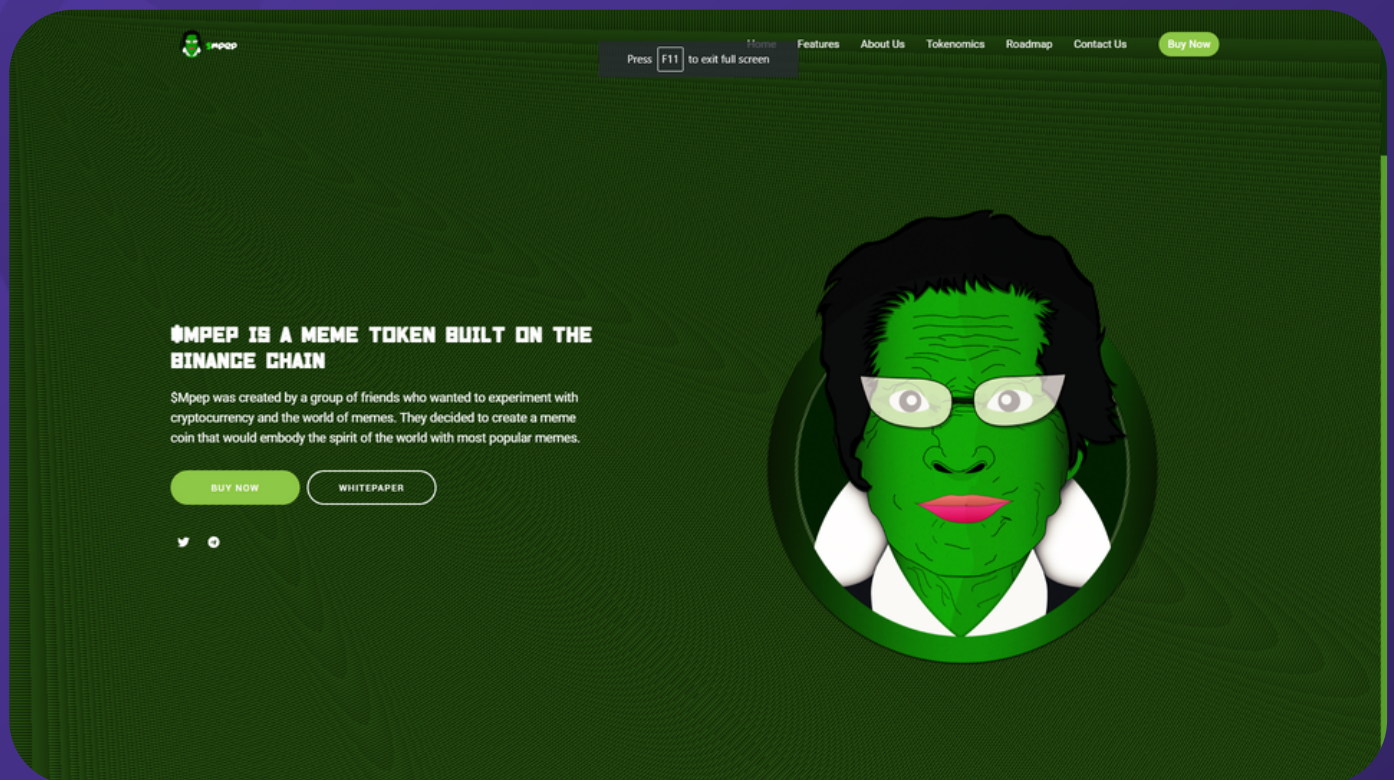

PROJECT DESCRIPTION

\$Mpep was created by a group of friends who wanted to experiment with cryptocurrency and the world of memes. They decided to create a meme coin that would embody the spirit of the world with most popular memes.

Team Expelee

CONTRACT DETAILS

Token Name: MPEP

Symbol: MPEP

Network: Binance Smart Chain

Language: Solidity

Contract Address:

0x8bccab8C45909aAf850eA4890701a54308729B31

Total Supply: 10000000000000

Owner's Wallet:

0x90106Fc2c22c0b895Ab2808c32414f700D21E391

Deployer's Wallet:

0x90106Fc2c22c0b895Ab2808c32414f700D21E391

Testnet:

<https://testnet.bscscan.com/address/0x0f5931DA51FBE4Fe881dB6458a4D0566009EfCbB>

OWNER PRIVILEGES

- Owner can exclude accounts from rewards
- Owner can exclude accounts from fees
- The owner can set max transaction amount within reasonable limits
- Owner can change swap token at amount within reasonable limits
- Owner can update Router address
- Owner can update Automated market maker pair
- Owner can update Dividend tracker address
- Owner can change claimWait
- Owner can change LiquidityWallet

AUDIT METHODOLOGY

Audit Details

Our comprehensive audit report provides a full overview of the audited system's architecture, smart contract codebase, and details on any vulnerabilities found within the system.

Audit Goals

The audit goal is to ensure that the project is built to protect investors and users, preventing potentially catastrophic vulnerabilities after launch, that lead to scams and rugpulls.

Code Quality

Our analysis includes both automatic tests and manual code analysis for the following aspects:

- Exploits
- Back-doors
- Vulnerability
- Accuracy
- Readability

Tools

- DE
- Open Zeppelin
- Code Analyzer
- Solidity Code
- Compiler
- Hardhat

VULNERABILITY CHECKS

Design Logic	Passed
Compiler warnings	Passed
Private user data leaks	Passed
Timestamps dependence	Passed
Integer overflow and underflow	Passed
Race conditions & reentrancy. Cross-function race conditions	Passed
Possible delays in data delivery	Passed
Oracle calls	Passed
Front Running	Passed
DoS with Revert	Passed
DoS with block gas limit	Passed
Methods execution permissions	Passed
Economy model	Passed
Impact of the exchange rate on the logic	Passed
Malicious event log	Passed
Scoping and declarations	Passed
Uninitialized storage pointers	Passed
Arithmetic accuracy	Passed
Cross-function race conditions	Passed
Safe Zepplin module	Passed

RISK CLASSIFICATION

When performing smart contract audits, our specialists look for known vulnerabilities as well as logical and access control issues within the code. The exploitation of these issues by malicious actors may cause serious financial damage to projects that failed to get an audit in time. We categorize these vulnerabilities by the following levels:

High Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

Medium Risk

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment.

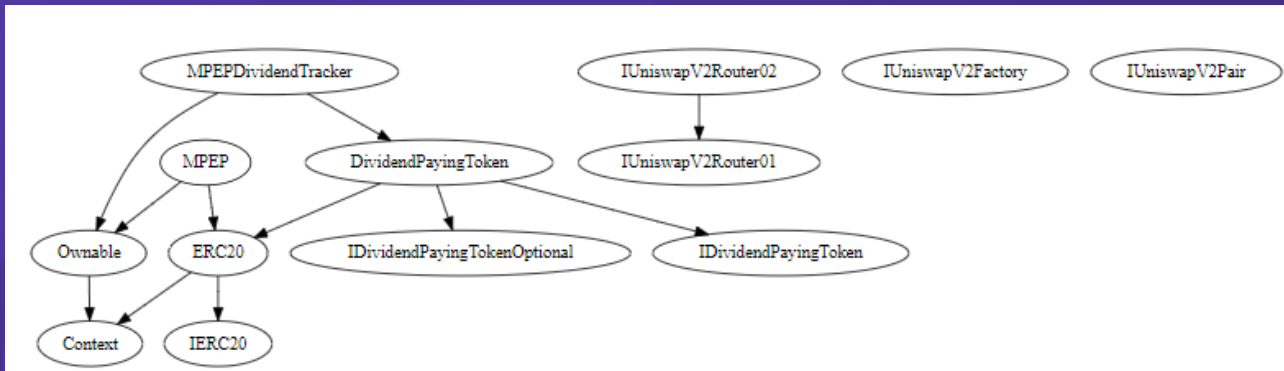

Low Risk

Issues on this level are minor details and warnings that can remain unfixed.

Informational

Issues on this level are minor details and warnings that can remain unfixed.

INHERITANCE TREES

FUNCTION DETAILS

```

|||||
**MPEP** | Implementation | ERC20, Ownable |||
| | <Constructor> | Public ! | ● | ERC20 |
| | <Receive Ether> | External ! | 🟢 | NO ! |
| | updateDividendTracker | Public ! | ● | onlyOwner |
| | updateUniswapV2Router | Public ! | ● | onlyOwner |
| | excludeFromFees | Public ! | ● | onlyOwner |
| | excludeMultipleAccountsFromFees | Public ! | ● | onlyOwner |
| | setAutomatedMarketMakerPair | Public ! | ● | onlyOwner |
| | _setAutomatedMarketMakerPair | Private 🔒 | ● | |
| | updateLiquidityWallet | Public ! | ● | onlyOwner |
| | updateGasForProcessing | Public ! | ● | onlyOwner |
| | updateClaimWait | External ! | ● | onlyOwner |
| | getClaimWait | External ! | | NO ! |
| | getTotalDividendsDistributed | External ! | | NO ! |
| | SetmaxSellTransactionAmount | External ! | ● | onlyOwner |
| | setswapTokensAtAmount | External ! | ● | onlyOwner |
| | isExcludedFromFees | Public ! | | NO ! |
| | withdrawableDividendOf | Public ! | | NO ! |
| | dividendTokenBalanceOf | Public ! | | NO ! |
| | getAccountDividendsInfo | External ! | | NO ! |
| | getAccountDividendsInfoAtIndex | External ! | | NO ! |
| | processDividendTracker | External ! | ● | NO ! |
| | claim | External ! | ● | NO ! |
| | getLastProcessedIndex | External ! | | NO ! |
| | getNumberOfDividendTokenHolders | External ! | | NO ! |
| | getTradingIsEnabled | Public ! | | NO ! |
| | _transfer | Internal 🔒 | ● | |
| | swapAndLiquify | Private 🔒 | ● | |
| | swapTokensForEth | Private 🔒 | ● | |
| | swapTokensForBNB | Private 🔒 | ● | |
| | addLiquidity | Private 🔒 | ● | |
| | swapAndSendDividends | Private 🔒 | ● | |
|||||
**MPEPDividendTracker** | Implementation | DividendPayingToken, Ownable |||
| | <Constructor> | Public ! | ● | DividendPayingToken |
| | _transfer | Internal 🔒 | | |
| | withdrawDividend | Public ! | | NO ! |
| | excludeFromDividends | External ! | ● | onlyOwner |
| | updateClaimWait | External ! | ● | onlyOwner |
| | getLastProcessedIndex | External ! | | NO ! |
| | getNumberOfTokenHolders | External ! | | NO ! |
| | getAccount | Public ! | | NO ! |
| | getAccountAtIndex | Public ! | | NO ! |
| | canAutoClaim | Private 🔒 | | |
| | setBalance | External ! | ● | onlyOwner |
| | process | Public ! | ● | NO ! |
| | processAccount | Public ! | ● | onlyOwner |

```

MANUAL REVIEW

Severity Criteria

Expelee assesses the severity of disclosed vulnerabilities according to methodology based on OWASP standards.

Vulnerabilities are divided into three primary risk categories:

High

Medium

Low

High-level considerations for vulnerabilities span the following key areas when conducting assessments:

- Malicious input handling
- Escalation of privileges
- Arithmetic
- Gas use

Overall Risk Severity				
Impact	HIGH	Medium	High	Critical
	MEDIUM	Low	Medium	High
	LOW	Note	Low	Medium
		LOW	MEDIUM	HIGH
	Likelihood			

FINDINGS

Findings	Severity	Found
High Risk	● High	0
Medium Risk	● Medium	1
Low Risk	● Low	3
Suggestion & discussion	● Informational	0
Gas Optimizations	● Gas Opt.	0

MEDIUM RISK FINDING

Owner can exclude accounts from rewards

Severity : Medium

Overview

Function that allows the owner of the contract to exclude an address from receiving dividends

```
function excludeFromDividends(address account!) external onlyOwner {  
    require(!excludedFromDividends[account!]);  
    excludedFromDividends[account!] = true;  
  
    setBalance(account!, 0);  
    tokenHoldersMap.remove(account!);  
  
    emit ExcludeFromDividends(account!);  
}
```

Recommendation

It is recommended to add additional access control measures, such as multi-factor authentication or time-based restrictions, to limit the number of authorized users who can call these functions. The contract owner account is well secured and only accessible by authorized parties.

LOW RISK FINDING

Owner can exclude accounts from fees

Severity : Low

Overview

Excludes/Includes an address from the collection of fees

```
3 references | Control flow graph | c024b6b8 | ftrace | funcSig
function excludeFromFees(address account!, bool excluded!) public onlyOwner {
    require(
        isExcludedFromFees[account!] != excluded!,
        "MPEP: Account is already the value of 'excluded'"
    );
    isExcludedFromFees[account!] = excluded!;

    emit ExcludeFromFees(account!, excluded!);
}

0 references | Control flow graph | c492f046 | ftrace | funcSig
function excludeMultipleAccountsFromFees(
    address[] calldata accounts!,
    bool excluded!
) public onlyOwner {
    for (uint256 i = 0; i < accounts!.length; i++) {
        isExcludedFromFees[accounts![i]] = excluded!;
    }

    emit ExcludeMultipleAccountsFromFees(accounts!, excluded!);
}
```

Recommendation

It is recommended to add additional access control measures, such as multi-factor authentication or time-based restrictions, to limit the number of authorized users who can call these functions. The contract owner account is well secured and only accessible by authorized parties.

LOW RISK FINDING

The owner can set max transaction amount within reasonable limits

Severity : Low

Overview

SetmaxSellTransactionAmount function that allows the contract owner to set the maximum sell tx amount

```
function SetmaxSellTransactionAmount(uint256 maxSellTransactionAmount!)  
    external  
    onlyOwner  
{  
    require(  
        maxSellTransactionAmount! >= 1000000000000 * (10**18),  
        "SellFee cant be lower than 1000000000000"  
    );  
    _maxSellTransactionAmount = maxSellTransactionAmount!;  
}
```

Recommendation

Verify that appropriate access control mechanisms are in place to restrict the **_maxSellTransactionAmount** function to the contract owner only. Ensure that the **onlyOwner** modifier is correctly implemented and that ownership cannot be easily transferred or compromised.

LOW RISK FINDING

Owner can change swap token at amount within reasonable limits

Severity : Low

Overview

setSwapTokensAtAmount function allows the owner of the contract to update the value of swapTokensAtAmount.

```
function setswapTokensAtAmount(uint256 swapTokensAtAmount!)
    external
    onlyOwner
{
    uint256 contractTokenBalance = balanceOf(address(this));
    require (swapTokensAtAmount! > 1000000 * (10**18),
        "swapTokensAtAmount cant be lower than 1000000"
    );
    require (swapTokensAtAmount! < 4000000 * (10**18),
        "swapTokensAtAmount cant be more than 4000000"
    );
    require(
        swapTokensAtAmount! >= contractTokenBalance,
        "swapTokensAtAmount cant be lower than current contract acumulated balance"
    );
    swapTokensAtAmount = swapTokensAtAmount!;
}
```

Recommendation

If the threshold is set too low, it could result in frequent and unnecessary swaps, which would increase gas fees and potentially lead to losses due to slippage. On the other hand, if the threshold is set too high, it could result in liquidity being insufficient to handle large trades, which could negatively impact the token price and liquidity pool. Be ensure that the contract owner account is well secured and only accessible by authorized parties.

ABOUT EXPELEE

Expelee is a product-based aspirational Web3 start-up. Coping up with numerous solutions for blockchain security and constructing a Web3 ecosystem from deal making platform to developer hosting open platform, while also developing our own commercial and sustainable blockchain.
